

MamNexa AI - Pre-Analysis Research Report

Case ID: SAMPLE-DEMO Generated (UTC): 2026-09-09T11:25:34+00:00

Research decision-support output only. This is NOT a diagnosis and does not confirm or rule out cancer. All findings Require Professional Review.

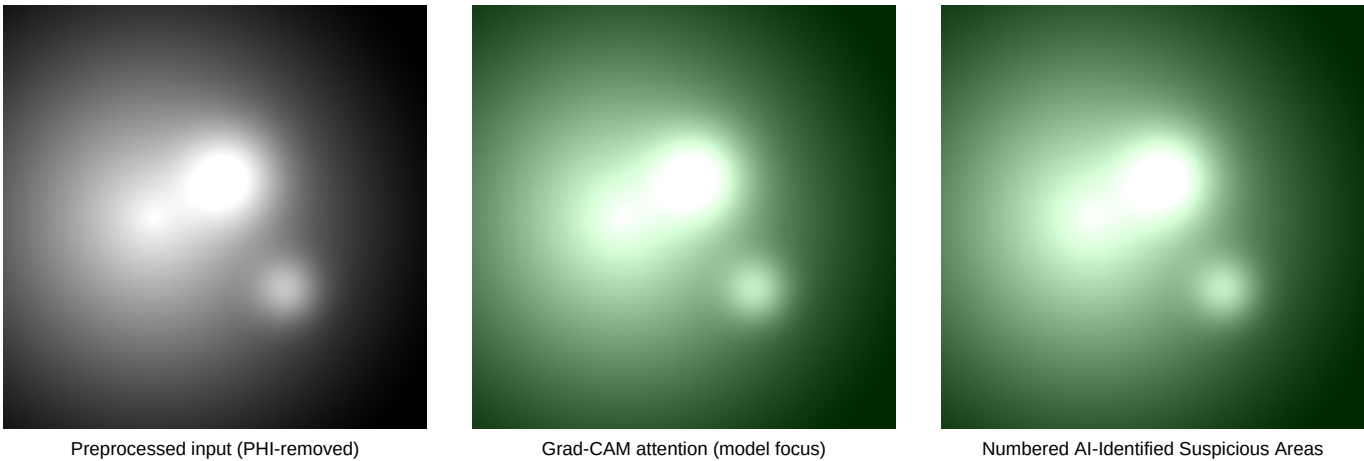

DEMONSTRATION OUTPUT - NO PREDICTIVE MEANING. The scores and regions in this report were produced by untrained model(s) with random weights (or a simulated fallback) to verify software behavior only. They are NOT predictions, probabilities of cancer, risk categories, or clinical assessments.

Analysis mode: demonstration (untrained models, random weights)
- classifier (EfficientNet-B0): untrained (random weights)
- segmenter (U-Net): untrained (random weights)
Input data provenance: Synthetic demo mammogram (built-in; not a real image)

Model Assessment

Model Malignancy Suspicion Index: 0.5127
Assessment: AI-Identified Suspicious Area
Recommendation: Requires Professional Review
Segmented AI-Identified Suspicious Areas: 1

Visual Explanation

Heatmap and outlines indicate regions the model attended to / segmented. They are explanatory aids, not clinical findings.

Segmented Regions

Region	Label	Area (px)	Centroid (x, y)	BBox (x,y,w,h)
#1	AI-Identified Suspicious Area #1	142.0	(120, 90)	102, 72, 36, 36

Technical Metadata (non-identifying)

analysis_mode: demonstration (untrained models, random weights)
model_status: classifier (EfficientNet-B0): untrained (random weights)
model_status: segmenter (U-Net): untrained (random weights)
data_provenance: Synthetic demo mammogram (built-in; not a real image)
Modality: MG (synthetic)
source_format: synthetic-demo
